

# Emissions

## Service overview

*Our carbon service offers invaluable insight into the European Union Emissions Trading System (EU ETS), as well as Kyoto Protocol offsets and emerging emissions markets in North America, China and elsewhere. Trevor Sikorski, who has ten years of experience covering these markets, leads the research from London.*

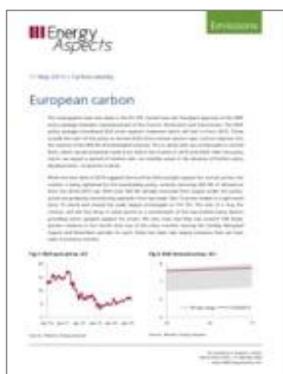

### Outlook

The EU ETS, Europe's high profile emissions trading scheme, has featured periods of intense price volatility driven by a frequently changing policy environment. Understanding the drivers behind the price volatility is essential for anyone with compliance obligations or trading interests in this area.

Our monthly Outlook report provides the tools for understanding these volatile markets. It provides detailed analysis of supply and demand fundamentals, policy, data, market participant behaviour and price movements. The Outlook includes an in-depth exploration of topics important to driving market prices, up-to-date market commentary, and long-term supply, demand and price forecasts for the European carbon market. As other carbon markets mature (California, China, Korea), these will increasingly be covered as part of the service.

*Published monthly (11 per annum). Format: PDF*

### Carbon Weekly

The Carbon Weekly report discusses the main current developments in the European emissions market. The report includes our view on price drivers in the market and where we expect EUA prices to go in the weeks ahead.

It also delivers a snapshot of fundamental information for the carbon markets including demand and supply drivers such as EUA auctions and upcoming policy events.

*Published weekly (48 per annum). Format: PDF*

## E-mail alerts

E-mail alerts provide rapid insights into how market events, news headlines and policy developments will influence emissions markets and prices. E-mail alerts offer a short summary of the event as it happens, together with any implications for balances and our market outlook.

*Published periodically. Format: E-mail*

## Access to Analysts

Call, E-mail, IM, meet. Contact our analysts for a rapid response, including explanations of analysis and to discuss market developments.
